Daniele Galli

The Crete-I School that I attended as a student was an extraordinary event that opened up my mind. The Proceedings volume of that School is the most worn-out science book I keep in my office. For all students of my generation, the two complementary reviews, by Charlie on observations, and Frank Shu on theory, were basic references to study over and over again, every time trying to go deeper and deeper.

I am very grateful to Charlie and Nick, among many other things, for making possible such an influential and absolutely unforgettable School.

The Future

A photograph of four men sitting around a table in a restaurant. The man on the left is gesturing with his hands while speaking. A speech bubble is overlaid on the image, containing the text: "You know, what I really want next is to see my Universe in 3D...". The man on the right is using a laptop. The background shows other tables and chairs in the restaurant.

You know, what I really want next is to see my Universe in 3D...

Charlie Lada's

Universe

The screenshot displays the WorldWideTelescope (WWT) interface. The main window shows a 3D scatter plot of the Milky Way galaxy, with various data layers overlaid. The interface includes a menu bar at the top with options like 'Open Session', 'Export Session', 'Import Data', 'Export Data/Subsets', 'Link Data', 'Arithmetic attributes', 'Active Subset', and 'New/Create new'. Below the menu bar, there are several panels for data collection, plot layers, and plot options.

Statistics

DEMO: The future of steps to revealing a wispy veil in 3D

1. “glue” data sets to each other
 2. drag data sets to visualize
 3. inspect cubes with 2D sliders
 4. adjust color
 5. inspect cubes as (superimposed) 3D volumes
- + bonus—comparison with traditional views & sliders

sample ALMA (spectral-line) data cubes courtesy of Jorma Harju

Find out more about glue, and download for free, at glueviz.org

No merging of data sets—just glue them.

The screenshot shows the Glueviz application window. The top menu bar includes 'python', 'File', 'Edit', 'View', 'Canvas', 'Data Manager', 'Plugins', and 'Help'. The title bar reads 'Glue' and the user name 'Jorma Harju' is visible. The toolbar contains buttons for 'Open Data', 'Export Data/Subsets', 'Link Data', 'IPython Terminal', 'Open Session', 'Export Session', and 'Add/edit arithmetic attributes'. The 'Data Collection' panel on the left lists two data sets: 'meth_cube_hdrfixed' and 'onh2d_cube_hdrfixed'. The 'Plot Layers' and 'Plot Options' panels are currently empty. The main canvas area is a large white space with the text 'Drag Data To Plot' centered in a light gray font. A 'Tab 1' label is visible at the top of the canvas area.

An ALMA core

Just drag to visualize, e.g. series of 2D "channel maps."

The screenshot shows the Glue software interface. At the top is a macOS-style menu bar with 'python' and menus for 'File', 'Edit', 'View', 'Canvas', 'Data Manager', 'Plugins', and 'Help'. Below this is a toolbar with various icons and a status bar showing 'Tue May 29 10:39 PM Alyssa A Goodman'. The main interface is divided into three vertical panels on the left: 'Data Collection', 'Plot Layers', and 'Plot Options'. The 'Data Collection' panel contains a list of data items: 'meth_cube_hdrfixed' (selected) and 'onh2d_cube_hdrfixed'. The 'Plot Layers' and 'Plot Options' panels are currently empty. The central plot area is a large white space with the text 'Drag Data To Plot' centered in a large, light gray font. A tab labeled 'Tab 1' is visible at the top of the plot area.

An ALMA core

Adjust so each tracer is a different color.

Astronomy Picture of the Day

[Discover the cosmos!](#) Each day a different image or photograph of our fascinating universe is featured, along with a brief explanation written by a professional astronomer.

2019 September 25

The Pelican Nebula in Gas, Dust, and Stars
Image Credit & Copyright: [Yannick Akar](#)

Explanation: The Pelican Nebula is slowly being transformed. IC 5070, the official designation, is divided from the larger [North America Nebula](#) by a [molecular cloud](#) filled with dark [dust](#). The [Pelican](#), however, receives much study because it is a particularly active mix of [star formation](#) and evolving gas clouds. The [featured picture](#) was produced in three specific colors -- light emitted by [sulfur](#), [hydrogen](#), and [oxygen](#) -- that can help us to better understand these interactions. The light from young energetic stars is slowly transforming the cold gas to hot gas, with the [advancing boundary](#) between the two, known as an [ionization front](#), visible in bright orange on the right. Particularly dense [tentacles](#) of cold gas remain. Millions of years from now this nebula might no longer be known as the [Pelican](#), as the [balance and placement of stars and gas](#) will surely leave something that appears completely different.

1 Preamble

A variety of research on human cognition demonstrates that humans learn and communicate best when more than one processing system (e.g. visual, auditory, touch) is used. And, related research also shows that, no matter how technical the material, most humans also retain and process information best when they can put a narrative "story" to it. So, when considering the future of scholarly communication, we should be careful not to do blithely away with the linear narrative format that articles and books have followed for centuries: instead, we should

TEN QUESTIONS TO ASK WHEN CREATING A VISUALIZATION

The 10 Questions

1. **Who** | Who is your audience? How expert will they be about the subject and/or display conventions?
2. **Explore-Explain** | Is your goal to explore, document, or explain your data or ideas, or a combination of these?
3. **Categories** | Do you want to show or explore pre-existing, known, human-interpretable, categories?
4. **Patterns** | Do you want to identify new, previously unknown or undefined patterns?
5. **Predictions & Uncertainty** | Are you making a comparison between data and/or predictions? Is representing uncertainty a concern?
6. **Dimensions** | What is the intrinsic number of dimensions (not necessarily spatial) in your data, and how many do you want to show at once?
7. **Abstraction & Accuracy** | Do you need to show all the data, or is summary or abstraction OK?
8. **Context & Scale** | Can you, and do you want to, put the data into a standard frame of reference, coordinate system, or show scale(s)?
9. **Metadata** | Do you need to display or link to non-quantitative metadata? (including captions, labels, etc.)
10. **Display Modes** | What display modes might be used in experiencing your display?

Now, visit the 10QViz conversation! There's so much more to talk about.

Curious about the **origins** of 10QViz? Try the [About](#) page.

Want to learn **how best to use** and **participate** in 10QViz? Try the [How to](#) page.

Want to read about the **scholarship** behind 10QViz.org's questions? [Write](#) to ask for a draft of our research paper, Coltekin & Goodman 2019.
